Archenhold Observatory

Visit the oldest and largest public observatory in Germany!

The attendees of the EPSC2018 are cordially invited to join a 1.5 hour guided tour (in English or German) of the large telescopes, a Zeiss Kleinplanetarium and the sky-scientific museum.

The Archenhold Observatory is situated amid the Treptower Park.

The trademark of the Archenhold Observatory is the giant telescope, which was built in 1896. With its 21 meters focal length, it is the longest fully movable lens telescope on earth. It is also one of the ten most powerful lens telescopes in the world with a lens diameter of 680 millimeters. The colossus weighs a total of 130 tons and is still fully operational today.

The tour is free of charge. A donation to the observatory is appreciated.
